**Project Name**

## ■ What is a Storyboard?

A storyboard is a graphic layout that sequences illustrations and images with the purpose of visually representing events in a film, animation, motion graphic or other interactive media. Think of it like a comic book but for video. It shows the shots that make up a scene and can be created in either physical or digital form.

Storyboards are used by film directors, television producers, and video game designers to plan out the key events in their project. They are also used by animators to plan out the key frames in their animation.
